Computer Engineering Student | Focus: Backend Development & DevOps

OBJECTIVE

Computer Engineering student at COMSATS University with broad exposure across backend development, DevOps and cloud technologies. Eager to join an engineering team to actually build, get real feedback, and develop genuine expertise through hands-on work.

EXPERIENCE

Innovative Saudia Jul 2025 – Aug 2025
Backend Engineer Intern *Lahore*
[View Daily Progress Log]

- Learned backend and DevOps fundamentals: Linux, Docker, Git workflows, and cloud basics.
- Provisioned a first AWS EC2 instance and worked hands-on with S3.
- Built a serverless user API: API Gateway invokes a Lambda function that reads records from DynamoDB.
- Documented daily progress and learnings in a public GitHub log.

EDUCATION

COMSATS University Islamabad, Lahore Campus 2023 – 2027
Bachelor of Computer Engineering *Lahore*
CGPA: 3.54/4.0 | 7th Semester

PROJECTS

Full-Stack CRUD App with Automated CI/CD & Docker [GitHub]

- Built a DevOps-first app: every git push builds a Docker image, pushes it to a registry, and deploys to Oracle Cloud over SSH with no manual steps.
- Served the app behind Nginx on a custom domain, using the same Docker setup locally and in production.
- **Tech stack:** GitHub Actions, Docker, Nginx, Oracle Cloud, Node.js, Express.js, PostgreSQL, React.

IntelliSafe — Real-Time Site Safety System (Final Year Project, in progress) [GitHub]

- A real-time workplace monitor: an edge camera detects workers, missing helmet or vest, and hazards (fire, smoke, spill), then streams those events over MQTT into Redis for live alerts and a dashboard.
- **Tech stack:** Edge vision, MQTT, Redis Streams, Docker Compose, Python.

Serverless User Processing System [GitHub]

- Built a React frontend with a serverless backend: API Gateway invokes AWS Lambda, which reads and writes DynamoDB.
- Hosted the frontend as a static website on S3.
- **Tech stack:** AWS Lambda, API Gateway, DynamoDB, S3, React.

Sakura Corporation Network Design [GitHub]

- Designed a multi-site network in Cisco Packet Tracer: headquarters and two branches, with VLANs, trunks, and point-to-point WAN links.
- Wrote Cisco IOS configs for routers and switches: subnetting, OSPF area 0, and a default route toward the ISP.
- **Tech stack:** Cisco Packet Tracer, OSPF, VLANs, subnetting.

TECHNICAL SKILLS

- **Cloud & DevOps:** Linux (Bash, SSH, permissions, systemd, logs), Docker, Docker Compose, GitHub Actions (CI/CD), Nginx, MQTT, Redis Streams, AWS (EC2, S3, Lambda, API Gateway, DynamoDB), Oracle Cloud, Git
- **Networking:** VLANs, OSPF, subnetting, Cisco IOS (Packet Tracer)
- **Familiar / Learning:** Terraform, Kubernetes (fundamentals)
- **Programming:** JavaScript, Python, C/C++, SQL
- **Backend:** Node.js, REST APIs, PostgreSQL, MongoDB, SQL Server, Redis
- **Tools:** VS Code, LaTeX; AI-assisted development (Cursor, GitHub Copilot)
